

# BIKINI™ LOUNGER

## **WILL IN-POOL BIKINI LOUNGER PRODUCTS FADE?**

Tonik outdoor furniture is UV rated to resist fading. Extra longevity can be achieved by placing Tonik furniture in shaded areas or moving them indoors when not in use.

## **HOW DOES THE BIKINI LOUNGER STAY IN PLACE ON THE POOL'S LEDGE?**

The Bikini lounge is designed to be ballasted with pool water. This will require the unit to be filled slightly more than the water the lounge displaces to inhibit floating. The right amount of water will vary depending on the depth. It is recommended the user experiment with varying amounts of ballast to achieve the desired result.

## **WHY IS THE BIKINI LOUNGER FLOATING IN THE WATER?**

If the Bikini lounge is not secure, there is likely not enough pool water ballast in the unit. Add additional water until the unit is secure.

## **HOW OFTEN SHOULD I DRAIN THE WATER FROM THE BIKINI LOUNGER?**

Pool water in the Bikini lounge should be swapped once per season with freshly balanced and chlorinated water.

## **WHAT DO I DO WITH MY BIKINI LOUNGER PRODUCTS IF TEMPERATURES ARE GOING TO DROP BELOW FREEZING?**

The Bikini lounge should be fully drained in the event of freezing temperatures. Storage should be considered if high winds are expected as the unit will not have the additional ballast.

## **WILL SALTWATER OR CHLORINE DAMAGE THE BIKINI LOUNGER?**

The Bikini lounge is designed to be exposed to both saltwater, and chlorine.

## **WHAT DOES MY WATER DEPTH NEED TO BE IN ORDER TO USE THE BIKINI LOUNGER?**

Bikini works great in pools with water depth up to 8"

## **CAN THE BIKINI LOUNGER REMAIN IN THE POOL WHEN NOT IN USE?**

Yes. Removal is recommended in the case of freezing temperatures.

## **WILL MOLD GROW INSIDE THE BIKINI LOUNGER?**

It is recommended that the water used to ballast the Bikini Lounge be balanced and chlorinated. This will prevent mold from growing inside the lounge.
